MOVEMENT OF
"RENAISSANCE"**

International Political, Societal and Environmental Program

by Paul Elvere Valérie DELSART

I am the bearer of a **vision, an action plan, an atypical and highly ambitious application mechanism** relating to social engineering with an international dimension.

The EL4DEV program is a unique international social engineering program aimed at establishing a new fair and balanced civil society.

It is based on the **empowerment and sovereignty of nations** and represents a **transnational mechanism of national cohesion and societal diplomacy**. It creates **decentralized and interconnected cooperative connections** between peoples who work collectively for a common destiny.

This **political and societal program** is beginning to gain recognition and has already attracted the attention of high-ranking international influential actors whom I have personally approached.

It represents **an opportunity for all the nations of the world**. I am not currently known but I have **serious and noble political ambitions for the governance of France from 2022**.

Public relations are essential to the success of this **plan which aims to modify the environmental, social, educational, cultural and political landscape of France and many countries of the world** to evolve in the direction of social peace, national cohesion and what I call **EL4DEV societal diplomacy**.

This program is promising and will achieve all of its objectives with complete certainty.

I am the **founder and president of an independent French non-profit think-tank** carrying this vision: **LE PAPILLON SOURCE EL4DEV**

The Green Empire of the East and the West (EL4DEV Confederation): my vision

by Paul Elvere Valérien DELSART

The Green Empire of the East and the West is a **vast ecological and societal empire integrating all the nations of the East, West, North and South** and unequalled in human history due to its atypical characteristics; a strongly prosperous empire over time; an empire in which **all nations and territories are sovereign and self-sufficient**.

It is a **confederation of individuals, agroclimatic cities labeled LE PAPILLON SOURCE, ecovillages, micronations and small municipalities located all over the world** interacting in a decentralized manner through **numerous cooperation agreements in a common goal of societal development**.

It is a concept that takes the form of **a live action role-playing game in alternate reality, a massively multi-player strategy game in which the delimitation between fiction and reality is particularly imperceptible or even non-existent**.

The goal of the game is to **collectively found a new, just and balanced civilization and to transform the earth into a non-hostile forest planet** in which living things thrive. This goes through the **launch and the realization of many pharaonic projects on the whole planet**.

EL4DEV SOCIÉTAL DIPLOMACY

What if we were no longer talking traditional indicators as the geo-economic entity of a country, a continent or a geographical space but rather geo-societal entity, geo-intellectual entity or geo-creative density?
