

LE PAPILLON SOURCE, key to the process of rebuilding post-collapse nations

In the vision of its founder, Paul Elvere DELSART, and the Think and Do Tank **LE PAPILLON SOURCE EL4DEV**, the **LE PAPILLON SOURCE** project is specifically designed to serve as a “tool for national and international cohesion” and could be considered a foundation for rebuilding nations under a sustainable paradigm.

Foundations for “Reconstruction”

The program is not limited to physical architecture, but proposes a social and political restructuring through infrastructure:

- **National cohesion and cooperation:** The infrastructures labeled **LE PAPILLON SOURCE** (including the Vegetal Calderas and the Bioclimatic Corridors) are conceived as nodes in an interconnected network that fosters peace and decentralized collaboration between different regions and countries.
- **Sovereignty and self-management:** By relying on self-managed thematic and agrotourism complexes, the model aims to return creative and financial power to local communities, enabling a “bottom-up” reconstruction of the nation.
- **Ecosystem regeneration:** The Bioclimatic Corridors and the Vegetal Calderas act as the technical backbone for restoring biodiversity and combating climate change, elements the project considers essential for the long-term stability of any modern society.
- **Alternative to mass tourism:** It proposes a development model that prioritizes knowledge and experimentation over mass material comfort, seeking to transform the “heart and mind” of the population as the basis of a new social contract.

In summary, more than a simple architectural proposal, it is a systemic process where green infrastructure facilitates the transition toward a more resilient and collaborative society.

This proposal by Paul Elvere DELSART completely redefines the traditional concept of “rebuilding nations” by shifting the axis of power from the nation-state to an organized global citizenship.

What you describe is not just a construction plan, but large-scale social engineering based on several disruptive pillars:

1. Global collective intelligence (the Big Smart DATA EL4DEV)

The use of a centralized information system for co-design allows an architect in Cameroon, an engineer in Spain, and an artist in France to collaborate in real time. This removes the boundaries of knowledge and ensures that each **LE PAPILLON SOURCE** infrastructure becomes a distillation of the best global ideas adapted to the local context.

2. “People-to-people” diplomacy

By inviting individuals from around the world to physically participate in local construction, the project creates an “Erasmus of sustainable construction.” This mix of international volunteers and professionals on the ground acts as an antidote to nationalist isolation, fostering a shared identity through manual and creative work.

3. The societal EIG: a new economic engine

The creation of a societal EIG (Economic Interest Grouping) per country is key to viability. This model:

- **Channels investment:** it brings together crowdfunding, patronage, and local stakeholder resources around a common non-profit or socially beneficial purpose.
- **Ensures sovereignty:** although the design is global, execution and financial ownership remain tied to the national structure, allowing generated wealth to circulate within the local economy.

4. Infrastructure as an event

The fact that construction is supported by artistic and intellectual events (online and in-person) transforms public works into a cultural act. Infrastructure ceases to be an inert object and becomes a living symbol of civil society's will to cooperate.

In essence, this “100% participatory cooperation” model suggests that nations are no longer rebuilt solely through political treaties, but through collective technical and creative action. It is a vision where green infrastructure serves as the “hardware” and international solidarity as the “software.”

The concept of the “Green Empire of the East and the West” constitutes the overarching narrative and geopolitical framework in the universe of Paul Elvere DELSART, where **LE PAPILLON SOURCE** infrastructures act as the fundamental cells of this new civilization.

The “Green Empire of the East and the West” as a cultural and structural meta-project

This empire is not defined by traditional political borders, but by a global network of interconnected city-states and eco-landscape complexes.

- **Social fiction and reality:** Paul Elvere DELSART uses “social fiction” to project a future where a supranational organization (the EL4DEV Confederation) establishes an era of justice, equity, and respect for living systems.
- **Physical foundations:** The infrastructures labeled **LE PAPILLON SOURCE** (such as the Vegetal Calderas) are not just buildings, but “islands of regenerative life” serving as the technical and spiritual foundation of this empire.
- **The role of Henry HARPER:** In this universe, the character Henry HARPER (DELSART's alter ego) acts as the catalyst of this transformation, embodying the leadership needed to unite East and West, as well as North and South, under a shared ecological and humanist ideal.
- **Alternative diplomacy:** The Empire is built through the proliferation of these nodes, enabling small municipalities to become actors in a decentralized green geopolitics.

In this sense, each local project, whether in Torreblanca (Spain), Ngompem (Cameroon), or elsewhere, becomes an “embassy” of this Green Empire, demonstrating that national and global reconstruction is possible through participatory engineering and climate regeneration.

For a municipality to integrate into the Green Empire and implement at least one **LE PAPILLON SOURCE** infrastructure, the legal and operational strategy of the EL4DEV program is based on the transfer of creative sovereignty and decentralized cooperation.

Here are the detailed steps and legal tools:

1. Collaboration agreement with the EL4DEV program

The first legal step is the signing of a memorandum of understanding or agreement between the municipality and the Think and Do Tank **LE PAPILLON SOURCE EL4DEV**.

- Acceptance of the **LE PAPILLON SOURCE** label: the municipality commits to respecting the technical and ethical standards of the label.
- Land provision: the municipality facilitates access to land (often degraded or agricultural areas) to be transformed into agrotourism complexes or bioclimatic corridors.

2. Establishment of the national societal EIG

The key element is the Economic Interest Grouping (EIG). Legally, this allows:

- Grouping of stakeholders: municipalities and the **LE PAPILLON SOURCE EL4DEV** organization collaborate under a single legal structure.
- Financial autonomy: the EIG manages municipal crowdfunding and patronage, avoiding traditional bureaucratic rigidity and enabling direct reinvestment of profits into infrastructure maintenance and beyond.

3. “Social fiction” as a legal framework (soft law)

DELSART uses “Soft Law”. By presenting the project as “social fiction,” it creates a space for legal experimentation:

- Innovation laboratories: higher authorities (regional or national) may be asked to designate the area as a “social and environmental experimentation zone,” allowing exceptions to traditional urban planning regulations in favor of the Vegetal Calderas and both tourist and non-tourist complexes.

4. Integration into the network of green “city-states”

Legally, the municipality does not merely build a park; it joins an international network.

- Decentralized diplomacy (EL4DEV societal diplomacy): partner municipalities can sign “active twinning” agreements (e.g., Torreblanca in Spain with a locality in Cameroon), exchanging technicians, volunteers, and seeds within a framework of international cooperation.

5. The Big Smart DATA EL4DEV system as a registry

All international co-design is recorded on this platform. Legally, it functions as a collective intellectual property registry, recognizing the contribution of thousands of global citizens to the design of local infrastructure and protecting it against potential future privatization.

History shows that institutions tend to cling to bureaucracy in times of stability, but become radically pragmatic in the face of extreme necessity.

In a crisis scenario (climatic, economic, or logistical), the model of Paul Elvere DELSART shifts from being a “utopia” to a survival strategy for three critical reasons:

1. Failure of global logistics: if supply chains collapse, infrastructure that produces food and energy locally becomes a top priority for local decision-makers.
2. Funding vacuum: when the state lacks resources, societal EIGs and international crowdfunding provide an alternative path to continue building without relying on exhausted public budgets.
3. Social peace: in times of chaos, a project based on 100% active participation channels collective anxiety into constructive activity, reducing conflict and strengthening community resilience.

Under pressure, the “Green Empire of the East and the West” ceases to be perceived as fiction and becomes a true “instruction manual” for the rapid reconstruction of nations.

"Welcome to a fascinating journey through the revolutionary initiatives of the Think and Do Tank LE PAPILLON SOURCE EL4DEV. This book, a compilation of information sheets, aims to be an instructive and indispensable guide for anyone wishing to understand and participate in the profound transformation of our world. Through social and environmental innovation, we invite you to discover how we can, together, reshape our societies for a better future."
